Office Action Summary

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1, 4-10 and 29-30 drawn to altered polypeptides that produce an increased immunogenic response, classified in class 435, subclass 183+ and class 530, subclass 350+.
- II. Claims 11-13, drawn to nucleic acids, expression vectors and host cells, classified in class 435, subclasses 243+, 325+, 320.1 and class 536, subclass 23.1+x.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the polypeptides and nucleic acids of the different inventions have different properties and functions. Further, polypeptides with altered T-cell epitopes can be obtained without encoding such with a nucleic acid. For example, the T-cell epitopes can be altered by derivatization with PEG.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the

Art Unit: 1644

application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
